DeFuniak Springs, Fla. The Florida Department of Health in Walton County announces additional positive cases of COVID-19 in Walton County. The additional individuals are:

78-year-old female Florida resident

The Florida Department of Health in Walton County is working closely with all individuals, their close contacts, and healthcare providers to determine what additional COVID-19 testing may be required. We are also coordinating with local and state officials to ensure proper precautions are being taken to prevent the spread of COVID-19. DOH Walton stresses the importance of following the local, state, federal and CDC guidelines and practicing social distancing to protect those that are most at risk. Governor DeSantis issued Executive Order 20-83, directing the State Surgeon General and State Health Officer to issue a public health advisory to all persons over 65 years of age urging them to stay home and to take such other measures as necessary to limit their risk of exposure to COVID-19.

Testina

- If a person thinks they have COVID-19, they should call their health care provider before going to their office so the provider can take precautions to prevent exposing other people. Review your signs, symptoms and travel history with your physician. If you are without health insurance or a health care provider, please contact the Walton County Health Department at (850) 401-6453 so we can coordinate your medical evaluation and testing. Once you have been tested for COVID-19, self-isolate for 14 days or until you receive the results from your test and further guidance from your health care provider.
- Most people with confirmed COVID-19 infection reportedly have mild to moderate respiratory illness and can be managed at home in coordination with your provider and your local health department. Persons with severe illness may be hospitalized. Contact

tracing is done for many diseases including tuberculosis, vaccine preventable diseases like measles and pertussis, sexually transmitted diseases and now COVID-19. Contacts of a case of COVID-19 are placed in self-isolation for 14 days from their last date of exposure. These individuals monitor themselves for symptoms of fever, cough, shortness of breath. Public Health personnel stay in touch with the contact throughout the entire isolation process. DOH-Walton provides the individual with a phone number to call if they think they are getting sick. If a contact gets sick with symptoms consistent with COVID-19, that person will be tested. If that person comes back positive for COVID-19, then contact tracing begins again. If the contact of a COVID-19 case completes the 14-day isolation period without illness, they are cleared to return to their daily activities.

What you can do to protect you and your family at Home

- Continue to practice good hand washing. Cover coughs and sneezes. Stay
 home from work if you are sick and keep children home from school when sick.
- Remind family members not to touch their faces.
- Disinfect frequently touched surfaces like doorknobs, tables and handrails.
- Open windows or adjust air conditioning to increase ventilation.
- Treat vulnerable family members, such as those over the age of 65 or with chronic medical conditions, as though others are a threat to them. Practice good hygiene when caring for them. If they are sick, provide them with their own room, and keep the door closed.

What you can do at work

- Good hand hygiene is as important at work as it is at home. Encourage
 employees to clean hands at the door and send email reminders to clean
 hands throughout the day.
- Stop shaking hands. Use other, non-contact methods of greeting customers and coworkers.
- Disinfect frequently touched surfaces.
- Open windows or adjust air conditioning to increase ventilation.
- Consider videoconferencing for meetings whenever possible. When not possible, hold meetings in open, well-ventilated spaces.
- · Assess the risks of business travel.
- Handle food carefully and limit food sharing.
- Ensure cafeteria staff and their close contacts practice strict hygiene.
- Allow employees to stay home if they are sick or have a sick family member.

Businesses

Encourage employees and customers to:

- Stop shaking hands. Use non-contact methods of greeting.
- Clean hands at the door and send employees email reminders to clean hands throughout the day.
- Promote tap and pay to limit handling of cash.
- Disinfect frequently touched surfaces.
- Open windows or adjust air conditioning to increase ventilation.
- Avoid crowding by booking appointments to stagger customer flow.

Public Transportation Businesses

- Open windows whenever possible.
- Increase ventilation.
- Disinfect surfaces regularly.
